

# INFO Clinical Debriefing

## Project Summary

The INFO debriefing project introduces a structured, voluntary, and inter-professional discussion immediately after high-stakes clinical events to enhance team and system performance. This initiative aims to improve patient care while fostering a culture where all clinical team members feel valued, supported, and empowered to drive meaningful improvements. By providing a structured and supported process, INFO debriefing promotes staff well-being, strengthens team connections, and ensures that valuable insights lead to actionable changes in our fast-paced clinical environment.

## ➔ Physician Lead

**Dr. Stuart Rose**  
Emergency Department Physician

Dr. Stuart Rose joined the Emergency Department at PRH in July of 2024 from Alberta Health Services. During his time in AHS, Stuart realized that he was not debriefing enough of his own clinical cases and started to look at ways to make it easier to debrief every clinical case. Stuart championed INFO Clinical Event Debriefing to improve patient care through debriefing and learning from real cases. Stuart is passionate about Clinical Event Debriefing and has begun rolling out the process at PRH with hopes of spreading this valuable debriefing process throughout the health authority.
